Mario Arranz

SENIOR SOFTWARE ENGINEER

Winterthur, Switzerland | +41 (0) 799 50 8454
marioarranzr@gmail.com | marioarranz.com | Residency Permit: B

Senior Software Engineer with 12+ years of experience, most of it building backend systems and APIs for payments, digital identity and security products. Spent 5+ years on Paddle.com's payments platform while it scaled into a unicorn, working on Go and PHP microservices, payment gateway integrations and the cloud infrastructure behind them (AWS, GCP, Kubernetes, Terraform). Most recently lead engineer at Deep Impact AG, delivering AI and LLM-based solutions in production for clients. Active in crypto markets since 2020, including building and running my own algorithmic trading bot. Used to owning the full path from architecture and technical decisions through release, monitoring and incident response.

WORK EXPERIENCE

Senior Software Engineer **May 2025 - Sep 2026**
Deep Impact AG / Winterthur, Switzerland

- Lead engineer on several client projects, owning technical direction and architecture decisions end to end.
- Designed and integrated multiple LLM providers into production systems based on each client's use case, including Nano Banana for an image quality improvement and people-counting project, using Go, PHP, TypeScript and Python.
- Integrated crypto exchange APIs (Bybit, OKX and others) for client work in digital asset trading.
- Contributed to frontend work using React and GraphQL alongside backend development.
- Used AI-assisted development tools such as Cursor as part of the day-to-day workflow.

Senior Software Engineer **Mar 2020 - May 2025**
Paddle.com / London, UK / Switzerland, fully remote (reached unicorn status, $1.4B valuation, in 2022)

- Worked on the payments platform to support and add new gateways, providers and payment methods at scale, building Go and PHP microservices; also contributed to new-seller onboarding automations.
- Built a payment reprocessing system that classified failed payments by error type and queued them in SQS, enabling safe, targeted recovery from infrastructure incidents without touching legitimate business failures.
- Diagnosed and resolved production incidents, including recurring AWS regional outages and DDoS attacks, using Grafana metrics and logz.io logs to identify root cause and drive remediation.
- Responsible for creating and maintaining the cloud infrastructure needed for the payments platform (AWS, GCP, Kubernetes), and contributed to infrastructure-as-code with Terraform to standardize configuration across components.

Independent Algorithmic Trader (crypto) **2020 - 2023**
Self-employed, own capital, alongside employment / Go, WebSockets, Kraken, Hyperliquid

- Designed, built and operated a low-latency trading bot in Go on centralized (Kraken) and decentralized (Hyperliquid) exchanges, detecting millisecond-scale, liquidity-driven price spikes and trading their repetitions (often 10+ round trips per event).
- Capped position size at about 5% of the incoming liquidity so my own orders would not move the price in low-liquidity tokens.
- Profitable until 2023, when deeper market liquidity compressed short-term moves and removed the edge; stopped trading the strategy at that point.

Senior Backend Engineer **Apr 2019 - Mar 2020**
Touchnote / London, UK

- Development and improvement of a microservices architecture using Go and Node, following the API-Gateway pattern and integrating Redis, SQS, SNS and Lambda functions.
- Part of a very small backend team responsible for infrastructure, development, testing and release.

Backend Engineer **Oct 2017 - Apr 2019**
Yoti / London, UK

- Digital identity application. Part of the team responsible for delivery of the administration panel using microservices with Go and Node.

Project Manager / Full Stack Developer **Mar 2016 - Oct 2017**
IGEO ERP / Madrid, Spain

- Joined in the company's early stages as one of the first engineers, combining full stack development with project management for this cloud ERP focused on pest-control companies; coordinated customer service, design and development teams.

Full Stack Developer **Sep 2012 - Mar 2016**
Amadeus & Tecnilógica / Madrid, Spain

- Main developer of a management platform for travel agencies (Amadeus); earlier, software development for the tourism sector (Air Europa, Halcón Viajes) at Tecnilógica, starting as an intern during university.

SKILLS

Backend: Golang, PHP, Java, Node.js, TypeScript, Python
APIs & Architecture: REST/gRPC APIs, WebSockets, microservices, API-Gateway pattern, async messaging (SQS, SNS, pub/sub)
Data: MySQL, Postgres, Redis
Cloud & Platform: AWS, GCP, Docker, Kubernetes, Terraform, CI/CD (Git, CircleCI, Jenkins)
Reliability & Observability: Grafana, Kibana, New Relic, logz.io, incident response, root-cause analysis
AI / LLM: Claude, OpenAI & Nano Banana APIs, LLM integration, Cursor and AI-assisted development tooling
Crypto / Trading: Kraken, Hyperliquid, Bybit and OKX APIs, algorithmic trading, market impact and position sizing
Frontend: React, GraphQL

EDUCATION

Master's Degree in Computer Science
Complutense University of Madrid, Spain | 2007 - 2014

LANGUAGES

Spanish: Native | **English:** Fluent | **German:** Intermediate
